

Interprofessional teamwork: „Old wine in a new bottle?”

Cecilija Rotim, MSN, PhD ^(S)

Head Nurse, Andrija Stampar Teaching Institute of Public Health

Croatian Chief Nursing Officer

Factors that Affect Health System and Healthcare

- changes in society and politics
- the social system
- the population structure
- development of science and technology

Changes in Nursing

A group of healthcare professionals, including doctors and nurses, are gathered around a table in a meeting room. They are looking at a laptop and documents, suggesting a collaborative discussion or a presentation. The scene is brightly lit, likely from large windows in the background. The professionals are dressed in white lab coats and blue scrubs, and all have stethoscopes around their necks. The overall atmosphere is professional and focused.

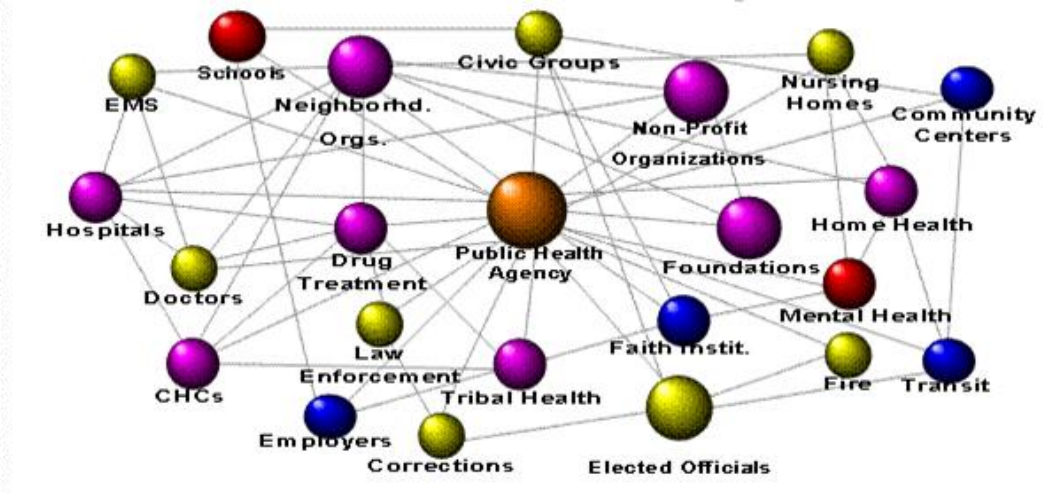

- Development of genetics and gene technology
- Development of non-invasive and precision diagnostic and therapeutic procedures
- 3D printing technology
- Robotics
- Bionics and biometrics development
- Electronic data logging system
- Telemedicine
- Expansion of informatic networks
